Severe weather is increasing and so are DTE Energy's efforts to strengthen the electric grid

DTE is committed to reducing power outages by 30% while cutting outage time in half over the next five years. To make these improvements possible, DTE is focused on executing our four-point plan to build the grid of the future that includes transitioning to a smart grid, updating existing infrastructure, rebuilding significant portions of the grid and trimming and removing trees away from our lines.

DTE's plan to have net-zero carbon emissions by 2050

DTE's CleanVision Integrated Resource Plan will dramatically reduce carbon emissions by accelerating coal plant retirements, investing in clean, Michigan-made renewable energy and prioritizing reliability and affordability in the transition to cleaner generation resources. These transformational changes will also support broader efforts to decarbonize our state's economy.

Helping customers manage their bills

DTE's energy usage tools can help customers better understand and manage their energy use to make the right decisions for their budget. With personalized data from their household, customers can analyze their energy usage by the hour, simulate different electric rates on their bill, project their future energy bill, take a deep dive into their bill contributors and more.

Providing energy assistance for those in need

Every day, DTE works to connect our customers to energy assistance and avoid an interruption of service. We encourage customers to reach out to us as soon as they think they may not be able to pay their upcoming bill. Learn more about all of the financial assistance options DTE offers its customers.

Using Energy Efficiency programs to save energy – and money

DTE's energy efficiency portfolio includes a wide range of energy-saving programs for residential, business and income-qualified customers. Each program offers a combination of energy efficiency products, customer incentives or rebates and education that can help customers save energy – and money.

Gas Renewal Program ensures safe, reliable, cleaner natural gas delivery

DTE Gas is investing \$3.3 billion through 2035 to replace more than 140 miles of natural gas pipeline each year with durable, corrosion-resistant polyethylene pipelines. The modernized infrastructure will help ensure DTE can safely, affordably and reliably deliver the natural gas its more than 1.2 million customers rely on.

Natural Gas Balance helps customers balance greenhouse gas emissions

DTE's CleanVision Natural Gas Balance program is open to all DTE Gas customers – residential and business – and serves as an easy and affordable way for customers to balance their greenhouse gas emissions from natural gas usage. When customers enroll in the program, they are helping protect Michigan's vast forests through carbon offsets and supporting renewable natural gas (RNG) development in our state.

MIGreenPower helps customers reduce their carbon footprint

DTE's CleanVision MIGreenPower program is Michigan's largest community solar program, open to all DTE Electric customers – both residential and business. By enrolling in MIGreenPower, customers are able to reduce their carbon footprint and support renewable energy development in Michigan by attributing more of their electricity use to DTE's wind and solar parks throughout the state. Customers can enroll for as little as \$1 a month.

Connecting customers with private generation systems

While DTE does not install rooftop solar or other private renewable energy generation systems for its customers, the company supports customers who want to take this step. DTE plays an important role in safely connecting these systems to the grid and works with customers and installers through all steps of the interconnection process.
