

A Guide to Heat Pump Water Heaters

Heat pump water heaters are gaining popularity across Michigan – and it's easy to see why. They're a great way to improve your home's comfort and energy efficiency.

How they work

They use electricity to move heat from one place to another – instead of generating the heat directly.

This leads to ...

- More control. Thanks to many operating modes, you can create customized settings – including a vacation and timer mode.
- Reduced carbon emissions and pollution factors.
- Energy efficiency. They use up to 63% less energy than traditional hot water heaters.

DTE

Find a local, qualified installer at dteenergy.com/eed to help you choose the most efficient heat pump water heater. And be sure to ask about rebates.
