

Potential Economic Impact of Carbon Capture & Sequestration (CCS) in Michigan

Carbon capture could bring many benefits to MI...

up to
20 MILLION
metric tons of
potential CO₂
sequestered
annually

up to
\$10 BILLION
of investment
in CO₂ capture,
transportation and
sequestration
infrastructure

the
potential
creation of
4,000
JOBS

CCS offers up to a \$10B investment opportunity in Michigan

- Includes \$8B in capture investment (both retrofits and new builds) at ~20 facilities across the state
- \$2B in infrastructure to develop an extensive carbon storage and transportation network throughout the state

CCS can create thousands of jobs for MI

- Nearly 4,000 jobs are projected to be created, with 2,000 jobs created in ongoing positions

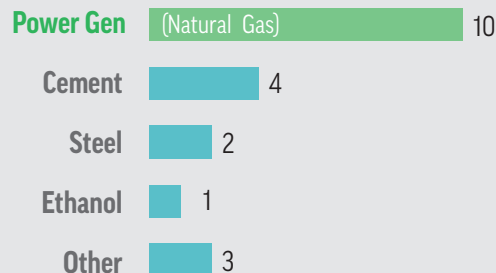

Opportunities for Michigan's economy

- Near-term CCS will target the power generation, steel, cement, and ethanol industries
- Jobs will also be created in construction, storage, and transportation operations and maintenance

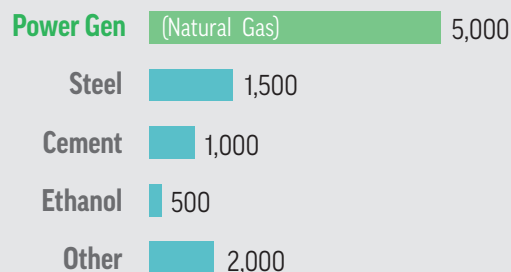

CCS will help MI meet its mid-century decarbonization goals

- CCS has the potential to make Michigan a leader in new technologies
- Early adoption will attract industry investment in the state

The annual metric tons of CO₂ sequestered could amount to the following (Million Metric Tons)

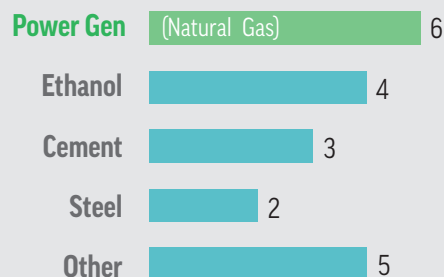

CAPEX (\$MM Capital Expenditure)¹

JOBS CREATED²

NUMBER OF FACILITIES

1. Total CAPEX for capture, transportation, and storage.
 2. Includes construction/development and ongoing jobs.
 Developed using information from Rhodium Group report *The Economic Benefits of Carbon Capture*, EPA FLIGHT database, and DTE internal estimates.
 Projected data gathered in August 2022

The image features the DTE logo in white, bold, sans-serif capital letters. The logo is positioned in the upper left quadrant of a solid blue background. To the right of the logo is a stylized sunburst graphic composed of numerous thin, light blue lines radiating outwards from a central point, creating a fan-like shape that extends towards the top right corner of the page.
